

CPSC 304 Project Cover Page

Milestone #: _____4_____

Date: _____November 25, 2022_____

Group Number: _____15_____

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Jason Wei	26637397	f9v2b	jasonwei828@gmail.com
Ceci Yang	66112566	z7f3b	ceciyang13@gmail.com
Terry Yoon	32170359	j4f3b	terryyoon1205@gmail.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

A short description of the final project, and what it accomplished

ApplyDay

We have created a job application platform for job seekers, HR recruiters and companies. A company can make a job posting and assign it to a recruiter. A recruiter works for a company and has access to all the applications for a specific posting. It is accomplished using Java Swing library with JDBC as the relational database.

A company can create a new job posting or update an existing job posting with the relevant information.

A recruiter who works for a company can see the applications for that job posting
A recruiter can see applicant stats such as names of applicants with more than 2 previous internship experiences, and people who have applied to all job postings.

An applicant can log in and see all of their applications and view all job postings.
An applicant can filter job postings by job type such as Internship, FullTime, All to show all.

x

An applicant can see job postings stats such as average pay for each job type.
An applicant can see the number of above average pay postings in each job type for each company's postings.

A description of how your final schema differed from the schema you turned in

- **If the final schema differed, explain why**

We have added new attributes, title and content, to the CoverLetter entity as we have forgotten to do so for the previous milestones. We also changed the Referral entity's primary key's name to referralID from employeeID to account for the fact that the same employee may make multiple referrals.

We added jobType to JobPostings Table to distinguish between Internship and FullTime job postings for easier development down the road to develop SQL queries, which allowed user to filter job postings by type.

Screenshots that show what data is present in each relation after the SQL script is run
